

## Chromebook Cart “Rules” for optimal wireless signal strength

-Because the Chromebook carts are mobile, the closest access point may not always be the connection currently attached to the Chromebooks within it; sometimes they will be using the signal from the access point down the hall or in another nearby area.

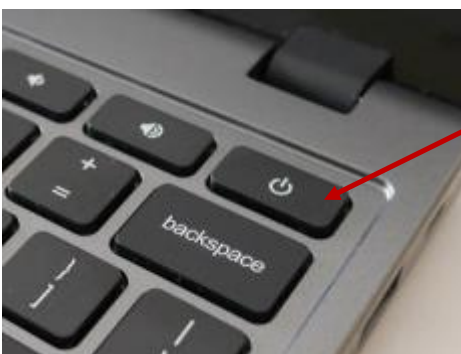

To be sure you are connecting to the closest access point, thereby having the best signal strength, it would be beneficial to follow the quick directions below: (this will only take about 10 seconds)

Press and hold this button

Watch the LED lights **go out**

Press the power button to turn the Chromebook back on.

It will now pick up the strongest wireless signal creating an improved online experience!

...just an FYI - There are two icons on the right edge of the Chromebook:

Power Indicator – Indicates the computer’s **power** status – the light show blue when powered on

Battery Indicator – Indicates the computer’s **battery** status

1. Charging: The lights shows amber when the battery is charging
2. Fully charged: The light shows blue when in AC mode (plugged in)
